AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-14. (canceled)

Claim 15. (original) A system for manufacturing a one-piece closed-shape structure using a mandrel, comprising:

- a preparing component configured to prepare the mandrel, wherein the mandrel comprises a bag and an armature;
- a first applying component configured to apply a frame mandrel to the mandrel to form a frame for the structure;
- a first filling component configured to fill the mandrel and the frame mandrel with media;
- a second applying component configured to apply a curable resign to a fiber;
- a third applying component configured to apply the fiber over the mandrel and frame mandrel to form the structure;
- a curing component configured to cure the structure;
- a removing component configured to remove the media from the mandrel and frame mandrel; and
- an extracting component configured to extract the mandrel and frame mandrel from the structure.

Claim 16. (original) The system of claim 15, wherein the preparing component further comprises:

- a placing component configured to place the armature through the bag; and
- a first conforming component configured to conform the shape of the bag to a desired shape of the structure.

Claim 17. (original) The system of claim 16, wherein the first conforming component further comprises:

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP

- a sealing component configured to seal the bag;
- a placing component configured to place the armature and the bag in a form tool; and
- a second conforming component configured to conform the shape of the bag to the form tool.
- Claim 18. (original) The system of claim 17, wherein the second conforming component further comprises:
 - a second filling component configured to fill a space between the armature and the bag with air; and
 - a creating component configured to create a vacuum between the form tool and the bag to force the bag to conform to the shape of the form tool.
- Claim 19. (original) The system of claim 15, wherein the first applying component further comprises:
 - a fourth applying component configured to apply a frame ply to an exterior of the bag; and
 - a fifth applying component configured to apply the frame mandrel over the frame ply.
- Claim 20. (original) The system of claim 15, wherein the filling component further comprises a compacting component configured to compact the media.
- Claim 21. (original) The system of claim 20, wherein the compacting component further comprises a vibrating component configured to vibrate the mandrel and frame mandrel to aid compaction.
- Claim 22. (original) The system of claim 15, wherein the third applying component further comprises:
 - a first winding component configured to wind the fiber over the mandrel and frame mandrel to form the structure.
- Claim 23. (original) The system of claim 22, wherein the first winding component further comprises:
 - a first placing component configured to place a first winding aid on the bag;

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP

- a second winding component configured to wind the fiber over the first winding aid, the frame mandrel, and the mandrel to form an inner skin:
- a first cutting component configured to cut the inner skin to remove the first winding aids;
- a second placing component configured to place a second winding aid on the inner skin;
- a third winding component configured to wind the fiber over the second winding aid and inner skin to form an outer skin; and
- a second cutting component configured to cut the outer skin to remove the second winding aids.
- Claim 24. (original) The system of claim 23, wherein the second placing component further comprises a third placing component configured to place a core piece on the inner skin.
- Claim 25. (original) The system of claim 15, wherein the curing component further comprises:
 - a first placing component configured to place a mold around an exterior of the structure:
 - a sealing component configured to seal the mold;
 - a second placing component configured to place the mold in a heating device; and
 - a heat applying component configured to apply heat to the mold using the heating device.
- Claim 26. (original) The system of claim 25, wherein the curing component further comprises:
 - a first creating component configured to create a vacuum in the mandrel; and
 - a second creating component configured to create a vacuum in the frame mandrel.
- Claim 27. (original) The system of claim 15, wherein the curing component further comprises:

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP

- a first placing component configured to place a mold around an exterior of the structure;
- a sealing component configured to seal the mold;
- a second placing component configured to place the mold in an autoclave; and
- a pressure applying component configured to apply pressure to the mold using the autoclave.

Claim 28. (original) The system of claim 15, wherein the structure is a fuselage of an aircraft.

Claim 29. (canceled)

Claim 30. (original) A system for manufacturing a one-piece closed-shape structure using a mandrel, comprising:

- a preparing means for preparing the mandrel, wherein the mandrel comprises a bag and an armature;
- an applying means for applying a frame mandrel to the mandrel to form a frame for the structure;
- a filling means for filling the mandrel and the frame mandrel with media;
- a first applying means for applying a curable resign to a fiber;
- a second applying means for applying the fiber over the mandrel and frame mandrel to form the structure;
- a curing means for curing the structure;
- a removing means for removing the media from the mandrel and frame mandrel; and
- an extracting means for extracting the mandrel and frame mandrel from the structure.

Claims 31-44. (canceled)

Claim 45. (original) A system for manufacturing a one-piece closed-shape structure, using a mandrel comprising:

a preparing component configured to prepare the mandrel, wherein the mandrel comprises a bag and an armature;

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP

- a first placing component configured to place the armature through the bag;
- a first conforming component configured to conform the shape of the bag to a desired shape of the structure;
- a first applying component configured to apply a frame mandrel to the mandrel to form a frame of the structure:
- a first filling component configured to fill the mandrel and the frame mandrel with media;
- a second applying component configured to apply a curable resign to a fiber;
- a third applying component configured to apply the fiber over the frame mandrel and the bag to form an inner skin;
- a second placing component configured to place a core piece on the inner skin;
- a fourth applying component configured to apply the fiber over the core piece and inner skin to form an outer skin;
- a third placing component configured to place a mold around an exterior of the structure;
- a curing component configured to cure the structure in the mold;
- a first removing component configured to remove the mold from the structure;
- a second removing component configured to remove the media from the mandrel and the mandrel frame;
- a first extracting component configured to extract the armature from the bag; and
- a second extracting component configured to extract the bag from the structure.

Claim 46. (original) The system of claim 45, wherein the first conforming component further comprises:

a sealing component configured to seal the bag;

FINNEGAN HENDERSON FARABOW GARRETT & DUNNERLL

- a fourth placing component configured to place the armature and the bag in a form tool; and
- a second conforming component configured to conform the shape of the bag to the form tool.
- Claim 47. (original) The system of claim 46, wherein the second conforming component further comprises:
 - a second filling component configured to fill a space between the armature and the bag with air; and
 - a creating component configured to create a vacuum between the form tool and the bag to force the bag to conform to the shape of the form tool.
- Claim 48. (original) The system of claim 45, wherein the first applying component further comprises:
 - a fifth applying component configured to apply a frame ply to an exterior of the bag; and
 - a sixth applying component configured to apply a frame mandrel over the frame ply.
- Claim 49. (original) The system of claim 45, wherein the first filling component further comprises a compacting component configured to compact the media.
- Claim 50. (original) The system of claim 49, wherein the compacting component further comprises a vibrating component configured to vibrate the mandrel and frame mandrel to aid compaction.
- Claim 51. (original) The system of claim 45, wherein the third applying component comprises:
 - a first winding component configured to wind the fiber over the frame mandrel and the bag to form the inner skin.
- Claim 52. (original) The system of claim 51, wherein the first winding component further comprises:
 - a fourth placing component configured to place a winding aid on the bag;
 - a second winding component configured to wind the fiber over the frame mandrels, the winding aid, and the bag to form the inner skin; and

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP

a cutting component configured to cut the inner skin to remove the winding aid.

Claim 53. (original) The system of claim 45, wherein the fourth applying component comprises:

- a first winding component configured to wind the fiber over the core piece and inner skin to form the outer skin.
- Claim 54. (original) The system of claim 53, wherein the first winding component further comprises:
 - a fourth placing component configured to place a winding aid on the inner skin;
 - a second winding component configured to wind the fiber over the core piece, the winding aid, and the inner skin to form an outer skin; and
 - a cutting component configured to cut the outer skin to remove the winding aid.
- Claim 55. (original) The system of claim 45, wherein the curing component further comprises:
 - a sealing component configured to seal the mold;
 - a fourth placing component configured to place the mold in a heating device; and
 - a heat applying component configured to apply heat to the mold using the heating device.
- Claim 56. (original) The system of claim 55, wherein the curing component further comprises:
 - a first creating component configured to create a vacuum in the mandrel; and
 - a second creating component configured to create a vacuum in the frame mandrel.
- Claim 57. (original) The system of claim 45, wherein the curing component further comprises:
 - a sealing component configured to seal the mold;

FINNEGAN HENDERSON FARABOW GARRETT & DUNNERLLP

- a fourth placing component configured to place the mold in an autoclave; and
- a pressure applying component configured to apply pressure to the mold using the autoclave.
- Claim 58. (original) The system of claim 45, wherein the one-piece closed-shape structure is an airplane fuselage.

Claim 59. (canceled)

- Claim 60. (original) A system for manufacturing a one-piece closed-shape structure, using a mandrel comprising:
 - a preparing means for preparing the mandrel, wherein the mandrel comprises a bag and an armature;
 - a first placing means for placing the armature through the bag;
 - a conforming means for conforming the shape of the bag to a desired shape of the structure;
 - a first applying means for applying a frame mandrel to the mandrel to form a frame of the structure;
 - a filling means for filling the mandrel and the frame mandrel with media;
 - a second applying means for applying a curable resign to a fiber;
 - a third applying means for applying the fiber over the frame mandrel and the bag to form an inner skin;
 - a second placing means for placing a core piece on the inner skin;
 - a fourth applying means for applying the fiber over the core piece and inner skin to form an outer skin;
 - a third placing means for placing a mold around an exterior of the structure;
 - a curing means for curing the structure in the mold;
 - a first removing means for removing the mold from the structure;
 - a second removing means for removing the media from the mandrel and the mandrel frame:

FINNEGAN HENDERSON FARABOW GARRETT & DUNNERLL

a first extracting means for extracting the armature from the bag; and a second extracting means for extracting the bag from the structure.

Claims 61-67. (canceled)

FINNEGAN HENDERSON FARABOW GARRETT & DUNNER LLP
